Seminar documents, beverages, lunchtime snack

What do the training seminars have to offer?

The focus is on your **professional future**.

We therefore offer up-to-date training in the field of ceramic material technology for industry and trade. Within this range of further vocational education we provide seminars in the following areas:

- Basic knowledge**
- Material technology**
- Process technology**
- Testing technology**
- Quality management**

You can find the schedule for our 2016 seminars on the back of this brochure. The seminars will take place at the **State College for Ceramic Technologies** in Höhr-Grenzhausen. The number of participants is limited to 15 to provide the optimum environment for a professional exchange.

In addition to these seminars, we also offer inhouse training at the company's sites in which we will adapt the focus of your staff's training courses to your company's needs.

Please contact us!

What do the speakers have to offer?

The industry seminars are held by lecturers of the State College for Ceramic Technologies. They are all graduate engineers in the field of material technology (glass and ceramics). All our speakers have long-standing **professional experience** in the ceramic industry.

Depending on the focus of the seminar, external experts might complement the college team of speakers.

Furthermore, the extensively equipped workshops and laboratories allow **practice oriented** training in all ceramic processes.

What does the State College have to offer for industry and trade?

The State College for Ceramic Technologies is an educational institution with a **long-standing tradition**. Since 1897 it has been renowned for its solid training and education of State Certified Engineers of Ceramics and therefore has secured the international supply for skilled personnel. Additionally, the State College has provided further-education seminars for industry and trade for more than 25 years.

Whether you are a skilled worker, master, technical or graduate engineer, business person or any other non-ceramist specialist - you will be provided with an opportunity to acquire basic and in-depth knowledge of ceramic emphases in our basic and advanced seminars.
